ABSTRAK

Pengecatan pada sepeda motor merupakan kegiatan memberikan lapisan cat pada bodi kendaraan guna mempercantik penampilan serta melindunginya dari korosi, goresan. Pengecatan mencakup seluruh bagian motor (*repaint total*) atau hanya area tertentu seperti tangki, spakbor, dan fairing. Umumnya, proses pengecatan memakai teknik semprot dan melalui beberapa tahap, seperti pengamplasan, aplikasi dempul kemudian aplikasi cat dasar (*primer*), pengecatan inti dengan *spray gun*, hingga pelapisan akhir dengan *clear coat* agar hasilnya tampak mengilap dan lebih tahan lama. Dalam video ini kita belajar proses proses *repaint* dari awal sampai akhir dengan singkat dan jelas.

Kata kunci : *Repaint*, Proses Pengecatan, Belajar Pengecatan.

ABSTRACT

Motorcycle painting is the process of applying a layer of paint to the vehicle's body to enhance its appearance and protect it from corrosion and scratches. Painting can involve the entire motorcycle (total repaint) or just certain parts such as the tank, fenders, and fairing. Typically, the painting process uses spray techniques and goes through several stages, including sanding, applying putty, then a primer coat, core painting using a spray gun, and finally a clear coat for a glossy and more durable finish. In this video, we learn the repainting process from start to finish in a concise and clear manner.
